

SkyNRG initiates BioPort Holland

Amsterdam Schiphol Airport, November 12, 2013, - SkyNRG, the Amsterdam-based global market maker in sustainable fuels has signed a Letter of Intent with the Dutch Government, KLM, Neste Oil, Port of Rotterdam and Schiphol Airport to scale up production for sustainable jet fuel in the Netherlands. The agreement was based on an ambitious plan initiated by SkyNRG last summer to ramp up supply by making use of Neste Oil's unique Renewable Diesel plant in Rotterdam and by accelerating other next generation fuel production tracks.

SkyNRG's role in the initiative is to set up a supply chain together with Neste Oil for sustainable jet fuel - with a focus on sourcing the necessary feedstock. The feedstock needs to both meet Neste Oil's stringent technical and sustainability criteria as well as meeting SkyNRG's own strict sustainability standards as laid down in its commitment towards the global Roundtable of Sustainable Biomaterials (RSB) standard and getting a positive advice from its independent sustainability board. Next to that, it will drive down further research and execution towards implementing other potential supply chain tracks in the Rotterdam Harbour.

SkyNRG CEO Dirk Kronemeijer commented: "The Netherlands is uniquely positioned to enable this breakthrough because of the position of the Rotterdam harbour as biggest Biomass port in the world and its pipeline infrastructure to three of Europe's largest airports. The country is lucky to be the home base to one of the most active airlines and one of the most active airports in the world in the field of sustainability; KLM and Schiphol Airport, to have the presence of the unique Neste Oil bio refinery and of course to have SkyNRG, the global market maker for sustainable jet fuel. But what makes this agreement really unique is that we have now also secured the extended support from the Dutch government to scale up this vital market in the global combat for fighting climate change. Our pitch to the Dutch government has always been: if we can't pull it off here, we can't pull it off anywhere. So we'd better just do it here, as we have strong ambitions for the world in this field."

About SkyNRG

SkyNRG's mission is to create structural supply and demand for sustainable jet fuels that are affordable. It's executing this mission short term via co-funded green routes (like AMS-JFK) and long term via developing regional supply chains that represent a real affordable alternative for fossil fuels- called BioPorts. The company is working closely together with multiple fuel technology partners to create the best fit for a region in the world- supported by its leading sustainability board and global technical board.

SkyNRG is now the world's market leader for sustainable jet fuel, having supplied more than 20 carriers worldwide. Since 2011 the has been company is expanding into the marine and heavy trucking segment as well. These segments like aviation have no better sustainable energy alternative other than truly sustainable fuels.
