

SkyNRG to announce second sustainable jet fuel customer: Thomson Airways

Amsterdam July 1 2011 – SkyNRG will supply Thomson Airways with sustainable jet fuel this summer. Thomson Airways announced earlier today that it will start operating one flight per week from Birmingham Airport on sustainable jet fuel from 28th of July 2011. Thomson is the second airline contracting with SkyNRG after KLM RoyalDutch Airlines. Birmingham Airport will represent SkyNRG’s second operational base after Schiphol Airport.

At this stage, it is anticipated that the weekly sustainable jet fuel flights will operate for one year from Birmingham to Palma in the summer and from Birmingham to Alicante in the winter. As sustainable jet fuels become more commercially viable, Thomson Airways plans to expand its use of sustainable jet fuels across its fleet over the next three years.

Both SkyNRG and Thomson Airways firmly believe that the adoption of “green routes” by airlines will help accelerate the development of sustainable and affordable jet fuels, which have the potential to reduce aviation emissions by up to 80% in the long-term.

Deidre Kotze, Airline Environmental Manager at Thomson Airways states: “Sustainability is key to this investment. SkyNRG’s robust approach on this matter, played a big role in giving them our confidence”.

“We have tried to make the entry barrier for airlines to embrace this new fuel era as low as possible” says SkyNRG’s Managing Director Dirk Kronemeijer. “Being selected as supplier for Thomson Airways is therefore a big deal for us as it proves that we are on the right track to help create this industry”.

About SkyNRG

SkyNRG is a Dutch company with the mission to help create the market for sustainable jet fuel that is affordable. After two years of research and development the company has created an one-stop shop for airlines integrating the complete supply chain for sustainable jet fuels. From feedstock-to-flight, the supply chain covers elements such as strict selection of sustainable feedstock, refining contracts, distribution to any airport in the world, quality assurance, in to plane fuel service, insurance, marketing and project (co) funding with airports and end customers. For Thomson Airways SkyNRG partners with US refiner Dynamic Fuels and has used as feedstock the waste stream Used Cooking Oil.

SkyNRG does not commit to one single feedstock or technology. The sustainability of alternative jet fuel depends on many factors, which are specific for each single case. To make the right decisions now and in the future, SkyNRG is advised by an independent Sustainability Board (in which 2 renowned NGOs and an academic institute hold a seat). Next to that, SkyNRG strives for harmonisation on certification of sustainable jet fuel and therefore actively supports the Roundtable on Sustainable Biofuels.
