

SkyNRG supplies 3 unique biofuel flights to Rio +20

Amsterdam, Toronto, Mexico City, June 19, 2012 - SkyNRG, the Amsterdam-based global market maker in sustainable jet fuel has supplied fuel to some unique flights to Rio de Janeiro for the United Nations Conference on Sustainable Development, known as Rio+20.

SkyNRG supplied fuel to the following flights in a first-ever series of connecting flights powered by sustainable alternative fuels:

- Air Canada flight 991, from Toronto to Mexico City, on an Airbus A319.
- Aeroméxico flight 014, from Mexico City to São Paulo, on a Boeing 777-200 as part of a blend mix supplied by Mexican fuel service company ASA.

The International Civil Aviation Organization (ICAO) launched this initiative, called the “Flightpath to a Sustainable Future”, with the support of the Air Transport Group (ATAG).

Also today SkyNRG supplied biofuel for KL705 departing from Amsterdam to Rio de Janeiro on a Boeing 777-200. This flight will be KLM’s first transatlantic flight on biofuel and carries various government delegations attending the Rio+20 conference.

All flights were supplied with sustainable jet fuel made out of waste used cooking oil.

About SkyNRG

SkyNRG’s mission is to help create a sustainable future for aviation through actively developing a sustainable production chain for alternative aviation fuels. Today the market for these fuels is just emerging; SkyNRG is taking the first steps to make it a reality. After two years of research and development the company has created a one-stop shop for airlines integrating the complete supply chain for sustainable jet fuels. From feedstock-to-flight, the supply chain covers elements such as strict selection of sustainable feedstock, refining contracts, distribution to any airport in the world, quality assurance, in to plane fuel service, insurance, marketing and project (co) funding with airports and end customers. SkyNRG is now the world’s market leader for sustainable kerosene, supplying more than 15 carriers worldwide. Longer term SkyNRG is focussing on developing local supply chains centred around leading airport across the globe (‘BioPorts’).

SkyNRG does not commit to one single feedstock or technology. The sustainability of alternative aviation fuels depends on many factors and has to be assessed on a case-by-case basis. To make the right decisions now and in the future, SkyNRG is advised by an independent Sustainability Board, consisting of the Dutch wing of the World Wide Fund for Nature (WWF-NL), Solidaridad, and the Copernicus Institute of Utrecht University. Next to that, SkyNRG strives for harmonisation on certification of sustainable jet fuel and therefore actively supports the Roundtable on Sustainable Biofuels.
